

**PROGRAMMING
ALABAMA**

Introducing new **App Development with Swift** course
using curriculum from **Apple** here at:

Wallace Community College - Dothan

How many times in the course of your day do you use apps on your mobile device? 5? 10? 50? Have you ever wanted to learn to create your own? The **Alabama Community College System** will be rolling-out the **Swift App Development Program** statewide this Spring Semester.

In the **App Development with Swift** course, students will learn to code and design fully functional apps, gaining critical job skills in software development and information technology. The curriculum is designed by **Apple** engineers and educators and uses **Swift**, one of the world's most popular programming languages. Mobile App development has been ranked as one of the hottest jobs to have in 2016 with the job market having been predicted to skyrocket by 32% from 2010 through 2020. Developers who can code in **Apple's Swift** programming language have been the most in demand over the past year. Don't miss your opportunity to learn to code with curriculum from the company who invented **Swift** and defined the App Economy.

“ Developers who can
code in Apple's **Swift**
programming language
have been the most in
demand over the past
year... ”
